UFO Spotted in the Sky of North Richland Hills, TX

On May 2, 2023, at 8:45 AM, a resident of the area reported witnessing an **unidentified flying object** (UFO) in the sky. This unusual event was reported at 4:06 PM the same day and shared with the public on May 19, 2023.

According to the witness, the object was a black hollow triangle shape and had three red lights at each point. They described the UFO as resembling a jet or spacecraft due to its triangular form. The witness noted that the object was moving very slowly, possibly conducting some sort of survey or surveillance.

What particularly intrigued the witness was that the object appeared to have no middle section or that it was invisible. They could clearly see the sky and clouds straight through it, but right above was a triangle with three lights at each point, slowly moving through the sky. Eventually, the UFO disappeared into the clouds, presumably ascending higher. The witness waited for 20 minutes but could no longer see it.

This sighting raises many questions about the origin and nature of the object. The red lights at each point of the triangle could indicate a certain intention or a particular mode of propulsion. The hollow shape and the ability to see through the object add an intriguing dimension to this observation.

While many rational explanations can be put forward to account for these observations, it is still crucial to conduct thorough investigations and remain open to all possibilities. Eyewitness testimonies and reports of this kind play a crucial role in seeking answers and exploring the unknown.
