

A flying saucer found under USAF hangar

Since many years, ufologists think that US Army hides the truth about UFOs. A searcher found on a satellite photo a proof that USAF have a flying saucer in one of this military installation.

Thanks to Google Maps, Scott C. Waring, an ufologist living in Taiwan, found a **huge disc-shaped UFO** cloaked inside a hanger.

He wrote:

“I found this 30 meter UFO parked under a hangar about 12 years ago and wanted to check on it to see if its still there. It is still there. So thats good to know. The disk actually had a hanger being built all around it. Its clear that they wanted to hide it inside a structure from prying eyes, but the google satellite caught sight of it in 2006 and took this map photo of it.

This is 100% proof that the USAF had UFOs way back in 2006. Talking about it is one thing...seeing satellite evidence is 100% proof.”
