

Man announces incredible discovery for May 8, 2021

A **time traveler**, who claims to be in the year 2582, explained that astronauts will discover a second Earth in the days to come.

The man, known by the pseudonym "authentictimetraveler," posted a video on the TikTok platform. He announced that scientists were going to make an incredible discovery on May 8, 2021. He explains:

"This is not a joke."

"On May 8th, 2021, astronauts will discover a planet exactly like Earth, in our solar system."

"It will be an exact clone of our Earth, with a mirrored effect."

He added that this will be the "*first time*" that humans find "*another human life in the galaxy*." The video caused a mini buzz. 1.6 million people have viewed these images. Either way, if nothing happens on May 8th then the time traveler will have lost all credibility ...
