

UFO filmed crashing into volcano in Mexico

On December 10, 2021, a camera filmed a **UFO** slowly entering the interior of Popocatepetl, Mexico...

On these images, we can see a luminous object descending slowly in the direction of the crater before disappearing. Is it a UFO that wanted to reach a hidden alien base? This is what ufologist Scott C. Waring thinks as he writes:

“This video was recorded straight from the live cam. The volcano is located not far from Mexico City. A UFO was caught moving very slowly, falling almost directly into the mouth of the volcano. It entered the left side of the volcano, where there is a known vent. The vent in that location often spews ash, lava and clouds every week. That's the opening I believe this UFO entered. I have long said that there is an alien base below Popocatepetl volcano. Not only have UFOs been seen passing over, around and into the volcano, but they have also been recorded exiting the mouth. There has even been sightings by the locals of 7 foot hairy beings with huge spikes on their heels of the feet seen climbing up the volcano side without any mounting climbing equipment.”
