

Three UFOs flew over a desert area of Richland

On January 20, 2022, **three mysterious UFOs** were discovered on Google Earth. These objects were flying over a desert area near Richland, Oregon.

Scott C. Waring explains:

“There are three glowing objects moving over the mountain area on Google Earth map. I had to make a video of it, before google map deleted them as they often do. At first when I look at it, they almost look like birds, but the shape is where the similarity totally ends. You see they are glowing white with a rainbow aura coming out the back end...which is some kind of propulsion. I have seen birds in google earth, but never like this. This is not birds. They may be fighter jets flying in unison, but again, I've never seen this shape of fighter jet before. These really appear to be UFOs. I checked the photos before and after this time in the same area (watch video) and there is nothing, no buildings, no debris, no cars, planes nothing that would indicate it was just a reflection off the ground. These things were flying, they were big and they were moving fast and had something coming out the back. That is 100% alien technology. I bet there is an alien base nearby about 5-6km below the surface of this very hill they are on.”
