

Mysterious alien statue found on Mars!

On January 30, 2022, a **mysterious statue** was photographed on the planet Mars by NASA. Is a trace of an ancient extraterrestrial civilization?

Scott C. Waring explains:

“Hey, there is a statue just laying on its back on the side of a hill on Mars. The rover drove just ten meters from it. Its about one meter long from head to feet and it has a lot of detail to it. It's not human by any means, but it is a bipedal species. It has two legs, to arms, broad shoulders...and a long head with an extended cranium. This artifact just screams out ancient alien culture on Mars. Not sure if its even possible that NASA missed it, but probably decided the photos would probably never be seen by the public, however we got lucky and here it is. 100% proof of ancient aliens on Mars...and they were intelligent enough to make statues!”
