Two cylindrical UFOs over Mount Asama, Japan

On February 27, 2022, **two cylindrical UFOs** were filmed over Mount Asama, a volcano located in the center of the island of Honsh?, about 140 km from Tokyo, Japan…

Scott C. Waring explains:

"*I was hunting UFOs using live cams. This is an essential tool that allows a researcher to watch worldwide at any given moment. Sadly live cams are under used by researchers. Here I found two craft that are cylydrme shaped. One stands out well above the mouth of the volcano. The other is less obvious...its in front of the volcano and lower. This object is huge, about the size of a 747 standing on end! Clouds are seen passing over the UFO...this is 100% proof that it is real. At times the UFO disappears behind the clouds, other times its in front of them. Absolute amazing and brings back memories of a movie called Arivals. Wow! Just wow!*"
