

A UFO filmed above Hawaii in February 2022

On February 16, 2022, early in the morning, an **UFO** was filmed near Lanikai beach in Hawaii, in the United States.

Scott C. Waring explains:

“I often use live cams to hunt UFOs...which I was doing last night, when I found this amazing and wonderful sighting off the island of Oahu. The two tiny islands in the video are small sleeping volcanos. But there are probably people living on those islands. However this object which first looks like a meteor and then like a plane...kept coming back three times. On the third time...it flew lower and its reflection could be seen on the surface of the ocean. It hovered in place on the far right of the island...still over the water not the island...where it sat and flashed for about 20 seconds before it flew away. This UFO looks similar to the glowing white orb seen over Dome of Rock holy of holies in Jerusalem many years ago. This was recorded at 2:56AM...which makes it more mysterious because who would be flying an aircraft without landing it at that hour? Aliens would be. Startling proof that aliens are active at volcanos in Hawaii.”
