

## A square UFO filmed by SOHO near the sun

On February 11, 2022, an **unidentified square-shaped flying object** was filmed near the sun by the SOHO probe. These surprising images were published on NASA's website.

Ufologist Scott C. Waring explains:

*“Guys, this is not your usual UFO by any means. Its a cube and its the size of Earth! SOHO viewer has a size comparison chart...and its the exact same size as Earth. So...this UFO is huge. Its shooting out of the sun and its leaving a trail of solar material behind it. Whats really cool about this photo is that its 100% proof of intelligent life. What I mean is, look at the line of solar material leading up to the UFO...it makes a 45 degree turn! Thats is impossible for any natural object to do in space, however, a spacecraft could do it. Its not the first time I have recorded such a craft near our sun. I have seen similar craft since 2010, which is included in the video I made below.”*
