

Morocco - UFO Sighting Near Casablanca

On July 26, 2023, at 10:30 PM, a witness reported a strange sighting on the National UFO Reporting Center (NUFORC) website. According to the testimony, an unusual observation occurred in Maarif, Casablanca-Settat, Morocco. The person claims to have seen an Unidentified Flying Object (UFO) of orb shape.

The observation lasted approximately five minutes and was marked by several intriguing characteristics. The object was surrounded by lights and an aura or haze. Moreover, it emitted beams of light. The witness also mentioned that this could potentially be a case of UFO abduction, as they experienced missing time.

According to the testimony, the UFO was stationary near the moon initially but then stopped moving, emitted light, and quickly flew northwest.

The person who reported the incident stated that they were stargazing from their roof in Morocco when the strange object caught their attention. Comparing it to a star at first, the witness quickly realized that its static nature and luminous behavior set it apart from the usual stars in the night sky.

As of now, no conventional explanation has been provided for this observation. NUFORC investigators may delve deeper into their inquiry to understand the origin of this mysterious event and whether there have been similar reports in the region.

In the meantime, the sighting remains an intriguing case of a UFO appearance near Casablanca, leaving room for speculation and questions about a possible extraterrestrial presence.
