

Triangular UFO spotted over Mariano Roque Alonso

A puzzling event took place on the evening of October 23, 2022, in Mariano Roque Alonso, Paraguay. Around 8:15 PM, a massive **unidentified flying object** (UFO) in the shape of a triangle was spotted in the sky, captivating the witnesses present.

The UFO, estimated to be approximately 1km on each side, was described as a dark triangular object resembling an arrowhead. What is particularly intriguing is the diffused light emanating from its apex, allowing the witnesses to discern it against the darkness of the night.

The UFO was moving in a south-eastern direction, towards Silvio Pettirossi Airport. Its movement was silent, making no noise. The object was not particularly attention-grabbing, which likely contributed to its discretion.

Additionally, the witnesses reported observing 2 to 3 low-orbit satellites shortly before the UFO's appearance. The witness and their spouse mutually confirmed the object's presence, thereby validating the visual observation of its shape, size, and movement.
