

Discoid UFO Sighted Near Austin, Texas

An enigmatic event shook the residents of Austin, Texas, when an anonymous witness reported observing an **Unidentified Flying Object** (UFO) of circular shape in the sky near Austin Bergstrom International Airport.

The incident occurred on July 28, 2022, at 6:38 PM local time, while the witness was driving on Highway 183, south of Highway 71, just west of the airport. According to the report, a strange shower had occurred, combining heavy rain and bright sunshine. As the witness had just cleared their windshield of rain, an unusual reflection caught their eye. At approximately a quarter of a mile from their location and at an altitude of about 200 feet, they spotted a disk-shaped object hovering in the skies.

What makes this sighting particularly intriguing is the witness's description of the object as having the appearance of a hollow disk. They claim to have been able to see inside the object, which emitted intense brightness. The UFO remained nearly stationary for about 50 seconds, allowing the witness to observe it in detail. The view was clear and unobstructed, strengthening their belief in the reality of this sighting.

In a state of shock and amazement, the witness continued driving while keeping an eye on the UFO. However, when they took one final look back, the object had mysteriously disappeared, leaving behind unanswered questions.
