

Silent UFO Sighted in San Jose, California

On February 1st, 2024, a report of an **unidentified flying object** (UFO) sighting was filed on the National UFO Reporting Center (NUFORC) website. The witness, who remained anonymous, claims to have observed the object at around 4:50 PM local time on January 28th, 2024, in San Jose, California.

The main witness claims to have spotted a black object at an altitude of approximately 2,000 to 4,000 feet and called other people to witness what he described as "something never seen before." The object, described as black, rotating, and changing shape, reportedly headed south before stopping and ascending to high altitude. It then hovered for several minutes, changed direction to the northeast, hovered again, and finally disappeared to the northwest, gaining altitude.

The witness specifies that the object made no noise and left no trace of smoke or emissions. The sky was clear with some partly cloudy areas. The observation lasted about 20 minutes, and the witness assumes that the object was not visible on radar because a passenger plane passed by it during one of the times it was hovering.

Analysis:

It is impossible to determine the nature of the object observed based on this single testimony. NUFORC encourages witnesses to provide as much detail as possible, including sketches, photos, or videos. The reports are then analyzed by volunteer experts who try to explain them by known natural phenomena before classifying them as "unidentified."
