

A UFO filmed above Cairo in May 2022

A new amateur video filmed during a thunderstorm on May 10th in Cairo is raising many questions. The footage, analyzed by ufology researcher Scott C. Waring, seems to show the sudden appearance of a **disc-shaped object** in the sky over the Egyptian capital.

According to the witness who shared the video on the MUFON platform, which catalogues UFO sightings, they were driving during a violent thunderstorm when a lightning bolt suddenly illuminated the sky. It was then that a disc-shaped object appeared progressively on the screen, literally materializing in front of the camera.

While some suggest the possibility of a simple windshield reflection, Scott C. Waring puts forth a completely different hypothesis. For him, this video could be proof of a centuries-old extraterrestrial presence in Egypt, particularly underneath the mythical Giza pyramids.

"Cairo, the cradle of ancient civilizations that built the pyramids, coupled with a powerful electrical storm, may have revealed a cloaked alien craft," states the renowned ufology researcher. *"This would confirm the existence of an underground extraterrestrial base beneath the pyramids, which captures the energy from lightning bolts to recharge itself."*

While this theory should obviously be taken with a grain of salt, the video is nonetheless fueling speculation about the origins of the pyramids and a possible extraterrestrial involvement in their construction - a recurring theory among some experts of the unexplained. One thing is certain, this new visual element is already sparking heated debates between supporters and skeptics on social media.
