

Soldier reports seeing UFO in New Mexico

A mysterious event occurred on June 3, 2024, near Laguna, New Mexico, when a member of the U.S. armed forces reported observing **two unidentified flying objects** (UFOs) with unusual characteristics.

The witness, who was driving eastbound on Interstate 40 around 3:50 PM, claims to have spotted two extremely bright flying objects moving at low altitude. According to his account, these objects had a triangular shape, similar to that of a paper airplane, and reflected sunlight with remarkable intensity, "like polished chrome or a mirror, but MUCH brighter."

What struck the observer was the perfect synchronization of the two objects' movements, as if they were tethered together. Their ability to maneuver surpassed anything the witness had ever seen before, with rapid directional changes in all dimensions: up, down, left, right, forward, and backward. At times, the objects remained perfectly motionless in the sky.

The incident lasted only about 30 seconds but left a strong impression on the witness. He estimated that the objects were about the size of a fighter jet and were approximately two miles from his position. The speed of movement was so high that it was impossible for him to estimate it accurately.

The observation ended when the two objects suddenly darted northward at such a high speed that they disappeared almost instantly from the witness's field of vision.

This testimony, reported to the National UFO Reporting Center (NUFORC) two days after the incident, adds to the long list of unexplained observations in this region of New Mexico, known for its rich history of UFO-related events.
