

Strange UFO seen from a plane in Texas

On June 1, 2024, a passenger on an American Airlines flight from Dallas-Fort Worth to Houston witnessed an **unexplained aerial phenomenon**. The incident, which occurred around 8:12 PM local time, was reported to the National UFO Reporting Center (NUFORC) a few days later.

According to the witness, who was observing from the left-side window in business class, a white disk-shaped object, comparable in size to a private jet, performed unusual movements. The sighting lasted approximately 30 seconds as the airliner was descending at an estimated altitude of 20,000 feet (about 6,100 meters) near Huntsville, Texas.

The witness describes particularly strange maneuvers: "Extreme upwards then it moved 90 degrees right (East) then 90 degrees left. In one second. As if avoiding something." These abrupt and rapid movements caught the passenger's attention, who claims to have never seen anything like it despite extensive travel experience.

The unidentified object was equipped with lights and was estimated to be about a mile (1.6 km) from the plane. The witness shared the observation with the flight crew, including the pilots, who reportedly called the incident "crazy" while preferring not to get further involved.

It's important to note that the witness, while claiming to believe in UFOs, presents themselves as someone simply seeking to share unusual information rather than as a conspiracy theorist.
