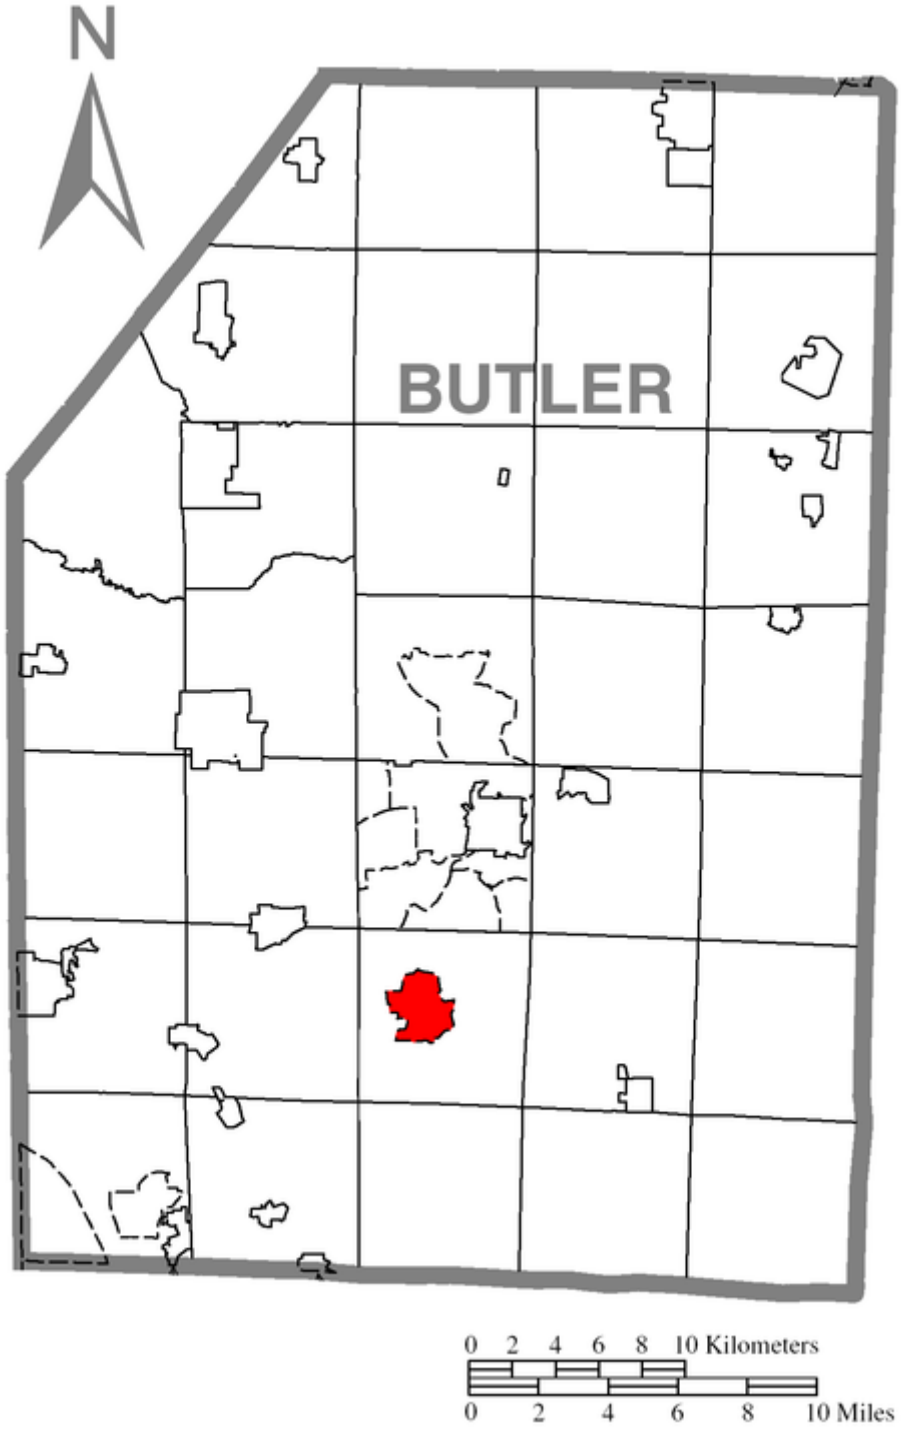
Disc-shaped UFO spotted over Nixon, Pennsylvania



Nixon, Pennsylvania, USA - A couple recently submitted a captivating testimony on the National UFO Reporting Center (NUFORC) website, recounting a mysterious sighting that occurred on November 12, 2023, at 6:55 PM local time.

The couple, returning from a family dinner, witnessed an unusual phenomenon as they were driving on a rural road near Nixon. The husband was the first to spot the **unidentified object**, illuminated with a green glow, which suddenly dropped downward before swiftly shooting upward in a "J" shape trajectory before disappearing into the sky.

The wife, also present during this observation, describes the object as having a disk-like shape and leaving behind a trail of red light. She emphasizes that the way it moved bore no resemblance to the flight pattern of a conventional aircraft. Instead of following a linear path, the object performed a circular maneuver before vanishing from their line of sight.

The clarity of the night allowed the witnesses to clearly discern the surrounding stars, accentuating the exceptional nature of the event. While the details of the testimony raise questions, the couple insists that the object bore no resemblance to an airplane. According to the husband, this marked his second UFO sighting, with the first occurring several years ago and exhibiting striking similarities to this event.

The report was filed on the NUFORC website on November 12, 2023, at 7:04 PM Pacific time and has since garnered interest from numerous UFO enthusiasts and sky observers. Although UFO sightings often invite diverse interpretations, this testimony offers intriguing details that warrant consideration.
