Several pyramidal UFOs in Neufchâtel in 1994

In the early summer of 1994, the town of Neufchâtel in Normandy was the scene of a **paranormal phenomenon** that remains unexplained to this day. On June 27, a motorist witnessed several pyramidal UFOs moving at high speed in the sky...

On that day, late in the morning, a motorist had to go to a hypermarket at 11 o'clock for a professional appointment. It was at this moment that this 51-year-old salesperson noticed the presence of two pyramidal forms that were less than a kilometer in altitude, he estimated. He specifies:

"The first form was pyramidal but tilted to the side. The second form was tapered and had fins."

These two astonishing objects emitted no light and were stationary. A third one appeared shortly after. This one flew over his vehicle for long and endless minutes, following him until the UFO accelerated and disappeared suddenly.

The man, completely bewildered and aware that he had witnessed an extraordinary phenomenon, decided to go to the police station to report his experience.

This case remains unexplained. The witness, whose word has not been doubted, neither filmed nor took photos of these UFOs. Furthermore, no other testimonies have been recorded to support the claims of this man.

What do you think about this observation?
